

PLACING A PURCHASE ORDER USING ONE OF
MULTIPLE PROCUREMENT OPTIONS

ABSTRACT OF THE DISCLOSURE

A method and system for placing an order to purchase an item via the Internet. The order is placed by a user at a client system and received by a server system. The client system can display information identifying the item and, for each of multiple procurement options having information related to ordering the identified item, can display an indication of the procurement option such that selection of the displayed indication represents an ordering of the identified item using the information of the procurement option. In response to selection of a displayed indication, the client system can send to a server computer a request to order the identified item using the information of the procurement option for the selected indication.
